

ZOMATO RESTAURANT

EXPLORATORY DATA ANALYSIS USING PYTHON

[READ MORE](#)

[START PRESENTATION](#)

PROJECT OBJECTIVE

The goal of this project is to analyze Indian restaurant data from Zomato using Python. We perform data cleaning, visualization, and exploration to identify trends in cuisine popularity, online delivery, ratings, and restaurant types. These insights can help businesses make data-driven decisions

TOOL SETUP AND DATA SOURCE

THE PROJECT IS BUILT USING PYTHON WITH KEY DATA ANALYSIS AND VISUALIZATION LIBRARIES INCLUDING PANDAS, SEABORN, AND PLOTLY. THE DATASET USED IN THIS ANALYSIS CONTAINS INFORMATION ABOUT INDIAN RESTAURANTS LISTED ON ZOMATO, INCLUDING THEIR CUISINE, LOCATION, RATINGS, AND DELIVERY OPTIONS.

UNDERSTANDING THE DATASET

The dataset includes thousands of records of restaurants across various Indian cities. It contains columns such as restaurant name, city, rating, votes, price range, availability of online delivery, and cuisines served. The structure and summary statistics of the data were analyzed to understand the quality and spread of the dataset.

DATA CLEANING

THE DATASET INITIALLY CONTAINED SOME MISSING OR NULL VALUES, ESPECIALLY IN COLUMNS LIKE RESTAURANT TYPE AND LOCATION. THESE WERE HANDLED BY REMOVING THE INCOMPLETE ROWS TO ENSURE ACCURACY DURING ANALYSIS. VISUAL TOOLS LIKE HEATMAPS WERE USED TO DETECT AND VISUALIZE THE MISSING DATA.

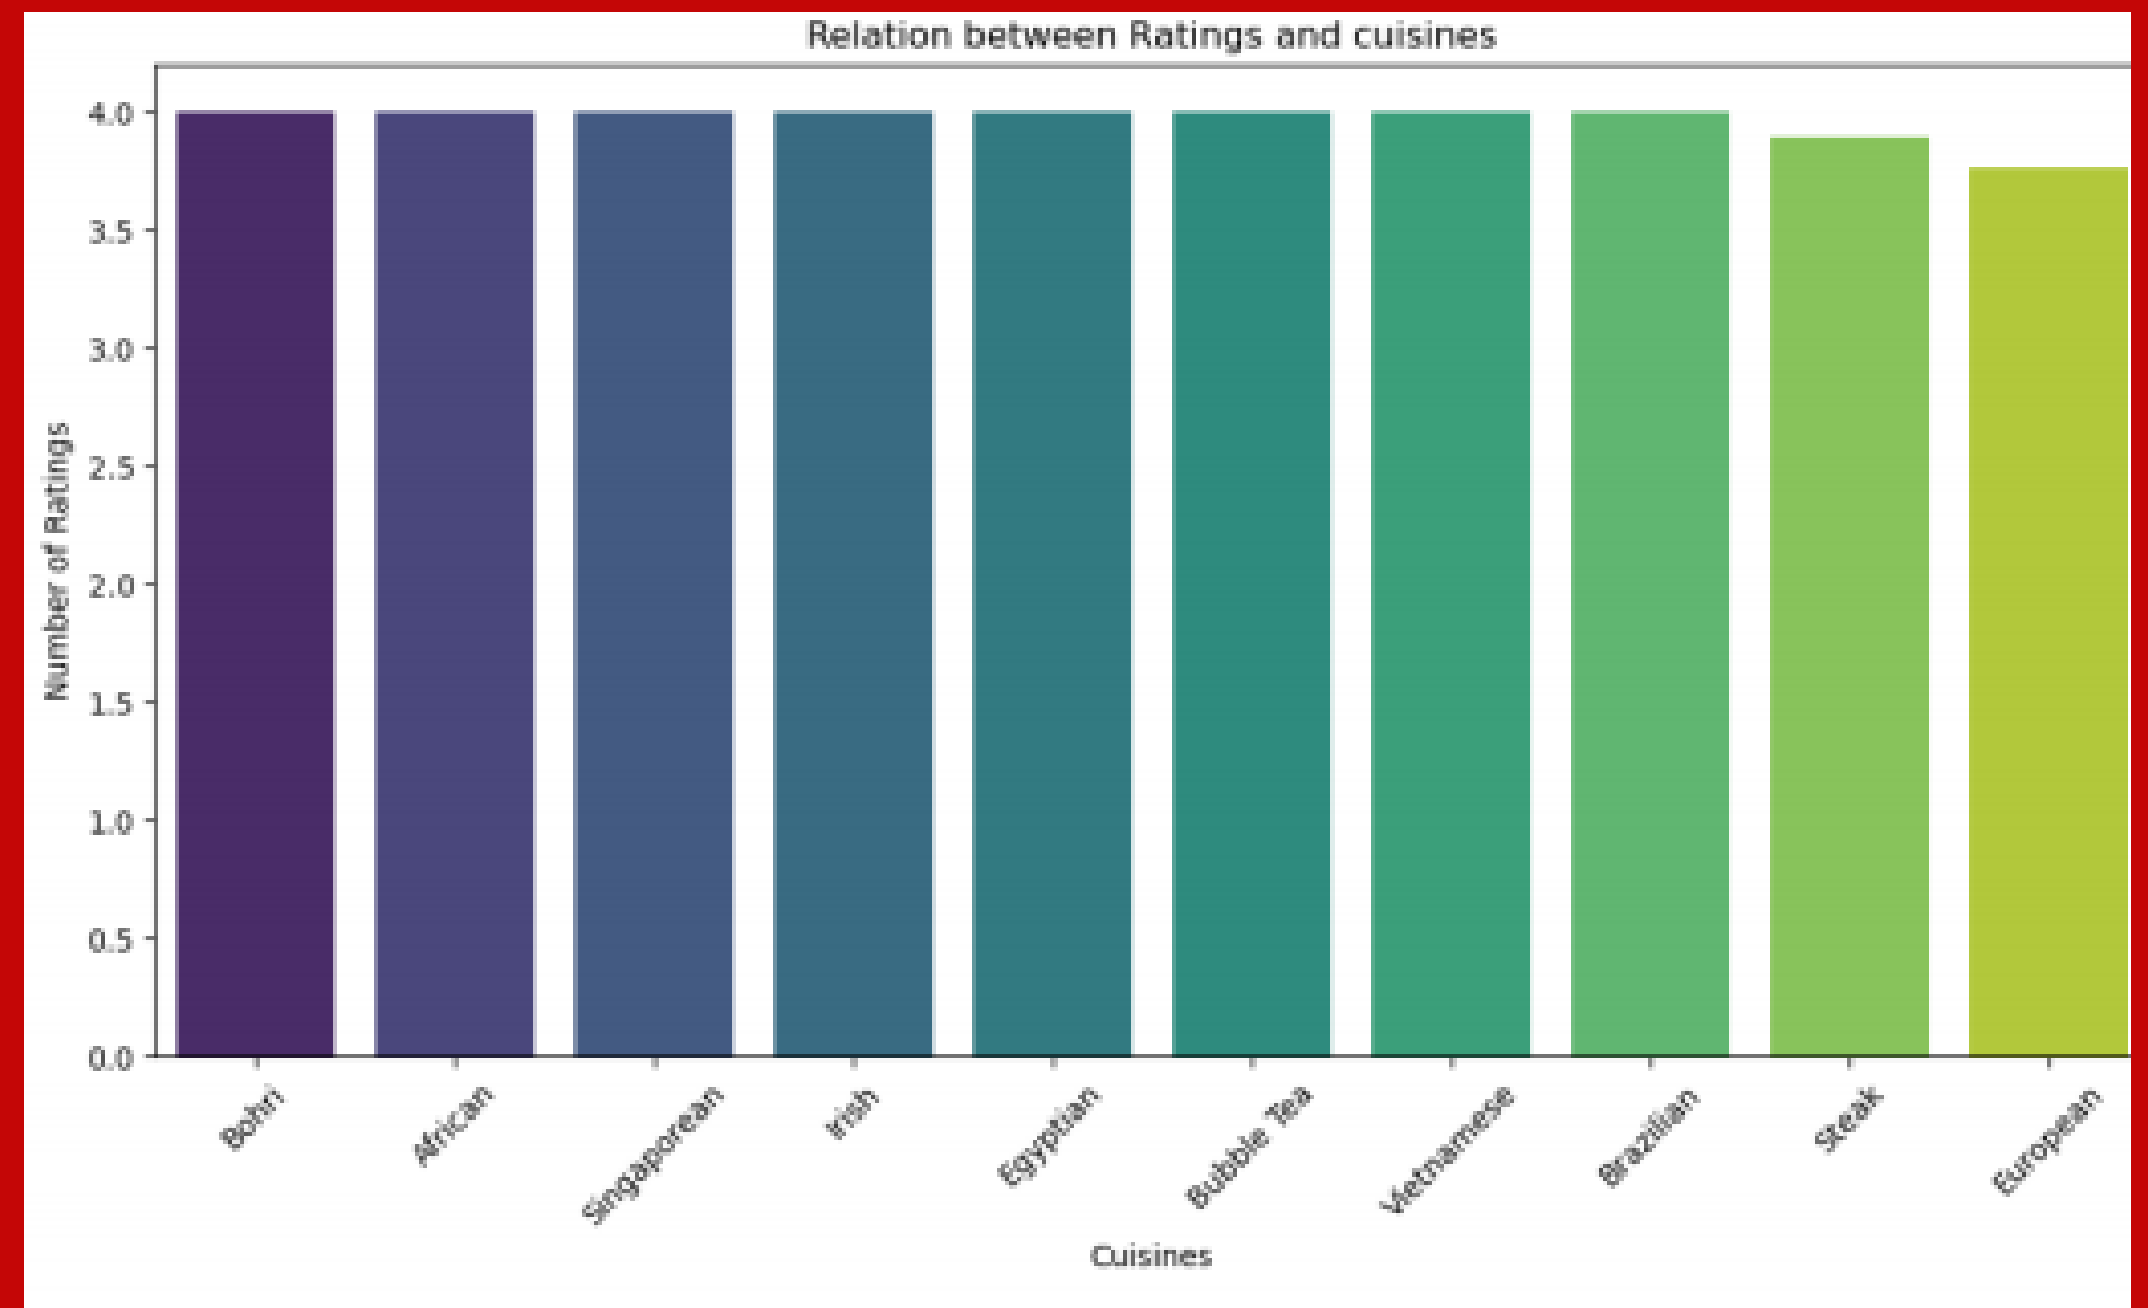

DATA EXPLORATION

UNIQUE ENTRIES

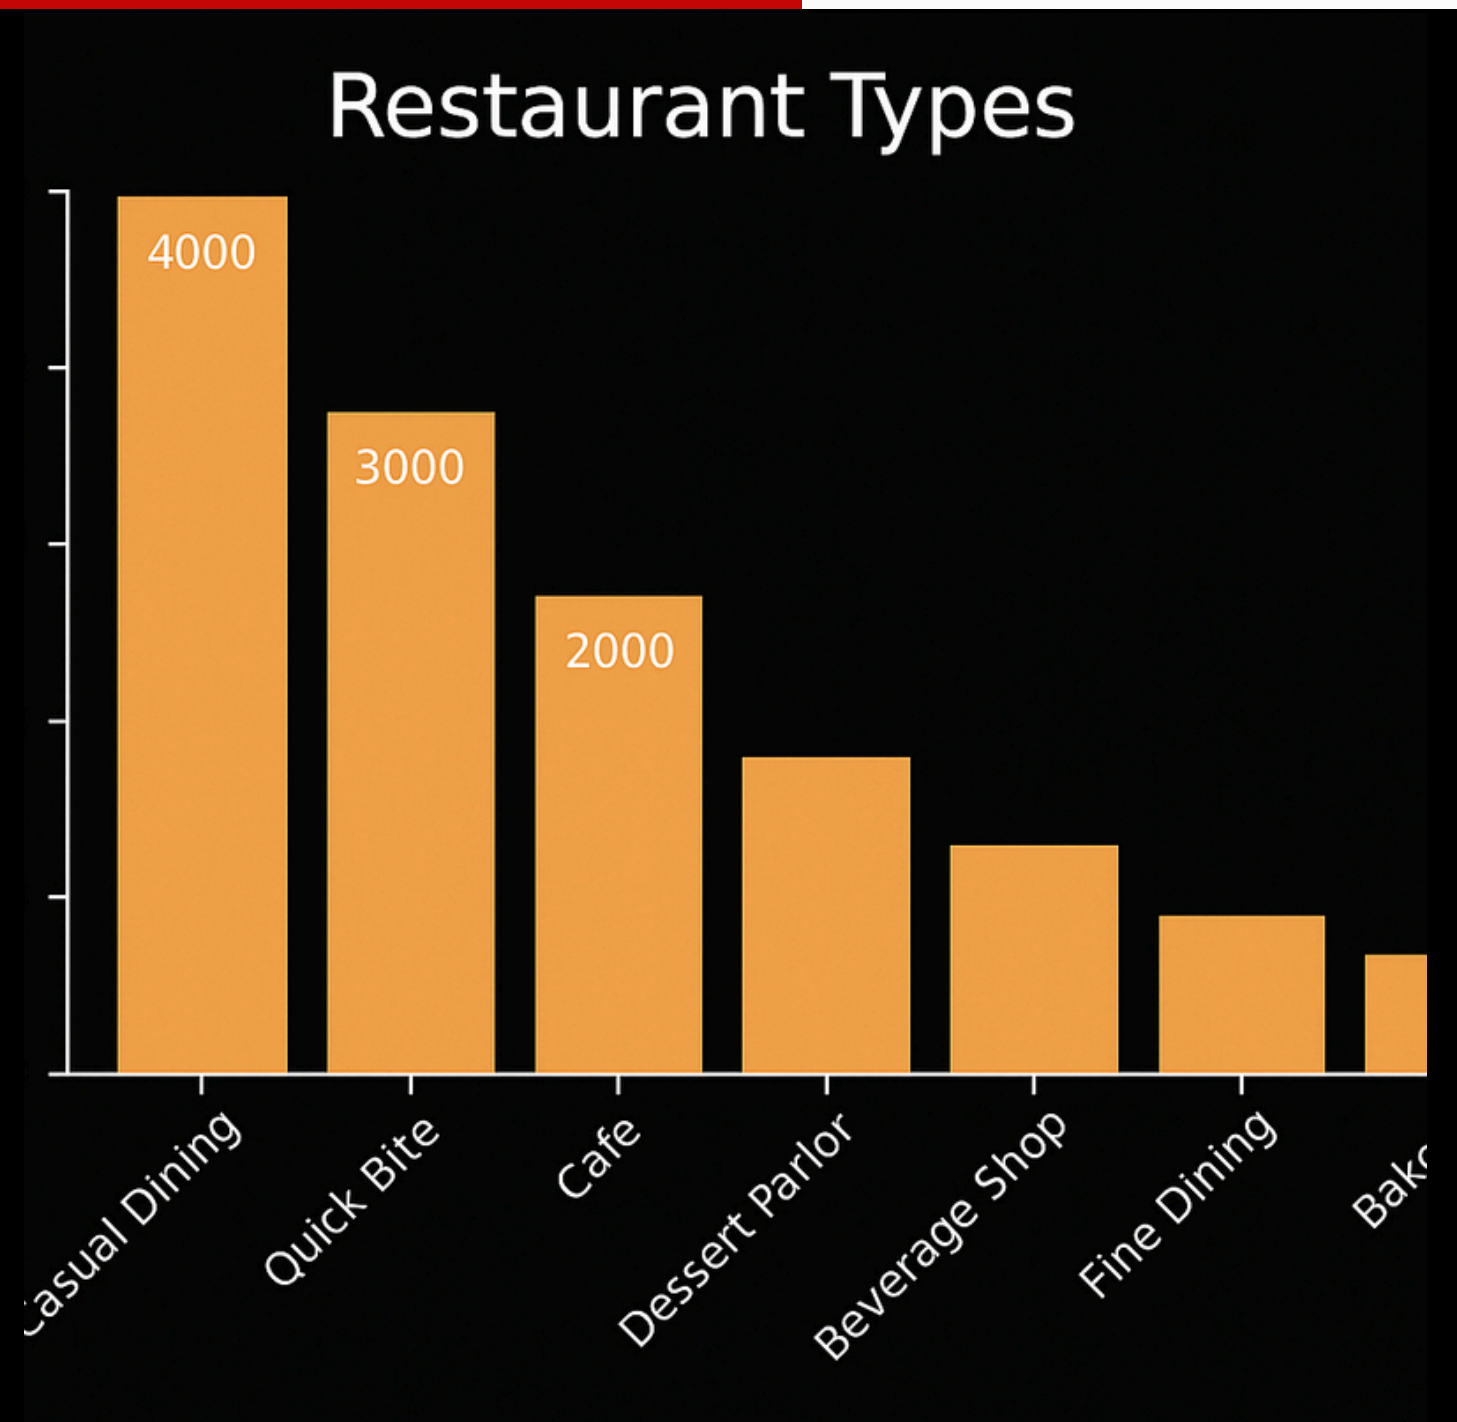

TO UNDERSTAND THE DIVERSITY IN THE DATASET, WE EXAMINED HOW MANY UNIQUE CITIES, CUISINES, AND RESTAURANT TYPES WERE PRESENT. THIS HELPED GUIDE WHICH ATTRIBUTES WERE WORTH ANALYZING FURTHER. FOR EXAMPLE, THERE WERE HUNDREDS OF UNIQUE RESTAURANT NAMES, BUT ONLY A HANDFUL OF POPULAR RESTAURANT TYPES.

TOP 10 CUISINES SERVED

NORTH INDIAN, CHINESE, AND FAST FOOD EMERGED AS THE TOP CUISINES SERVED ACROSS MOST INDIAN CITIES. THESE CUISINES DOMINATE DUE TO THEIR HIGH DEMAND AND AFFORDABILITY. THE INSIGHT HELPS BUSINESSES DECIDE WHICH CUISINE TYPES TO FOCUS ON WHEN LAUNCHING NEW FOOD OUTLETS.

Popular Restaurant Categories

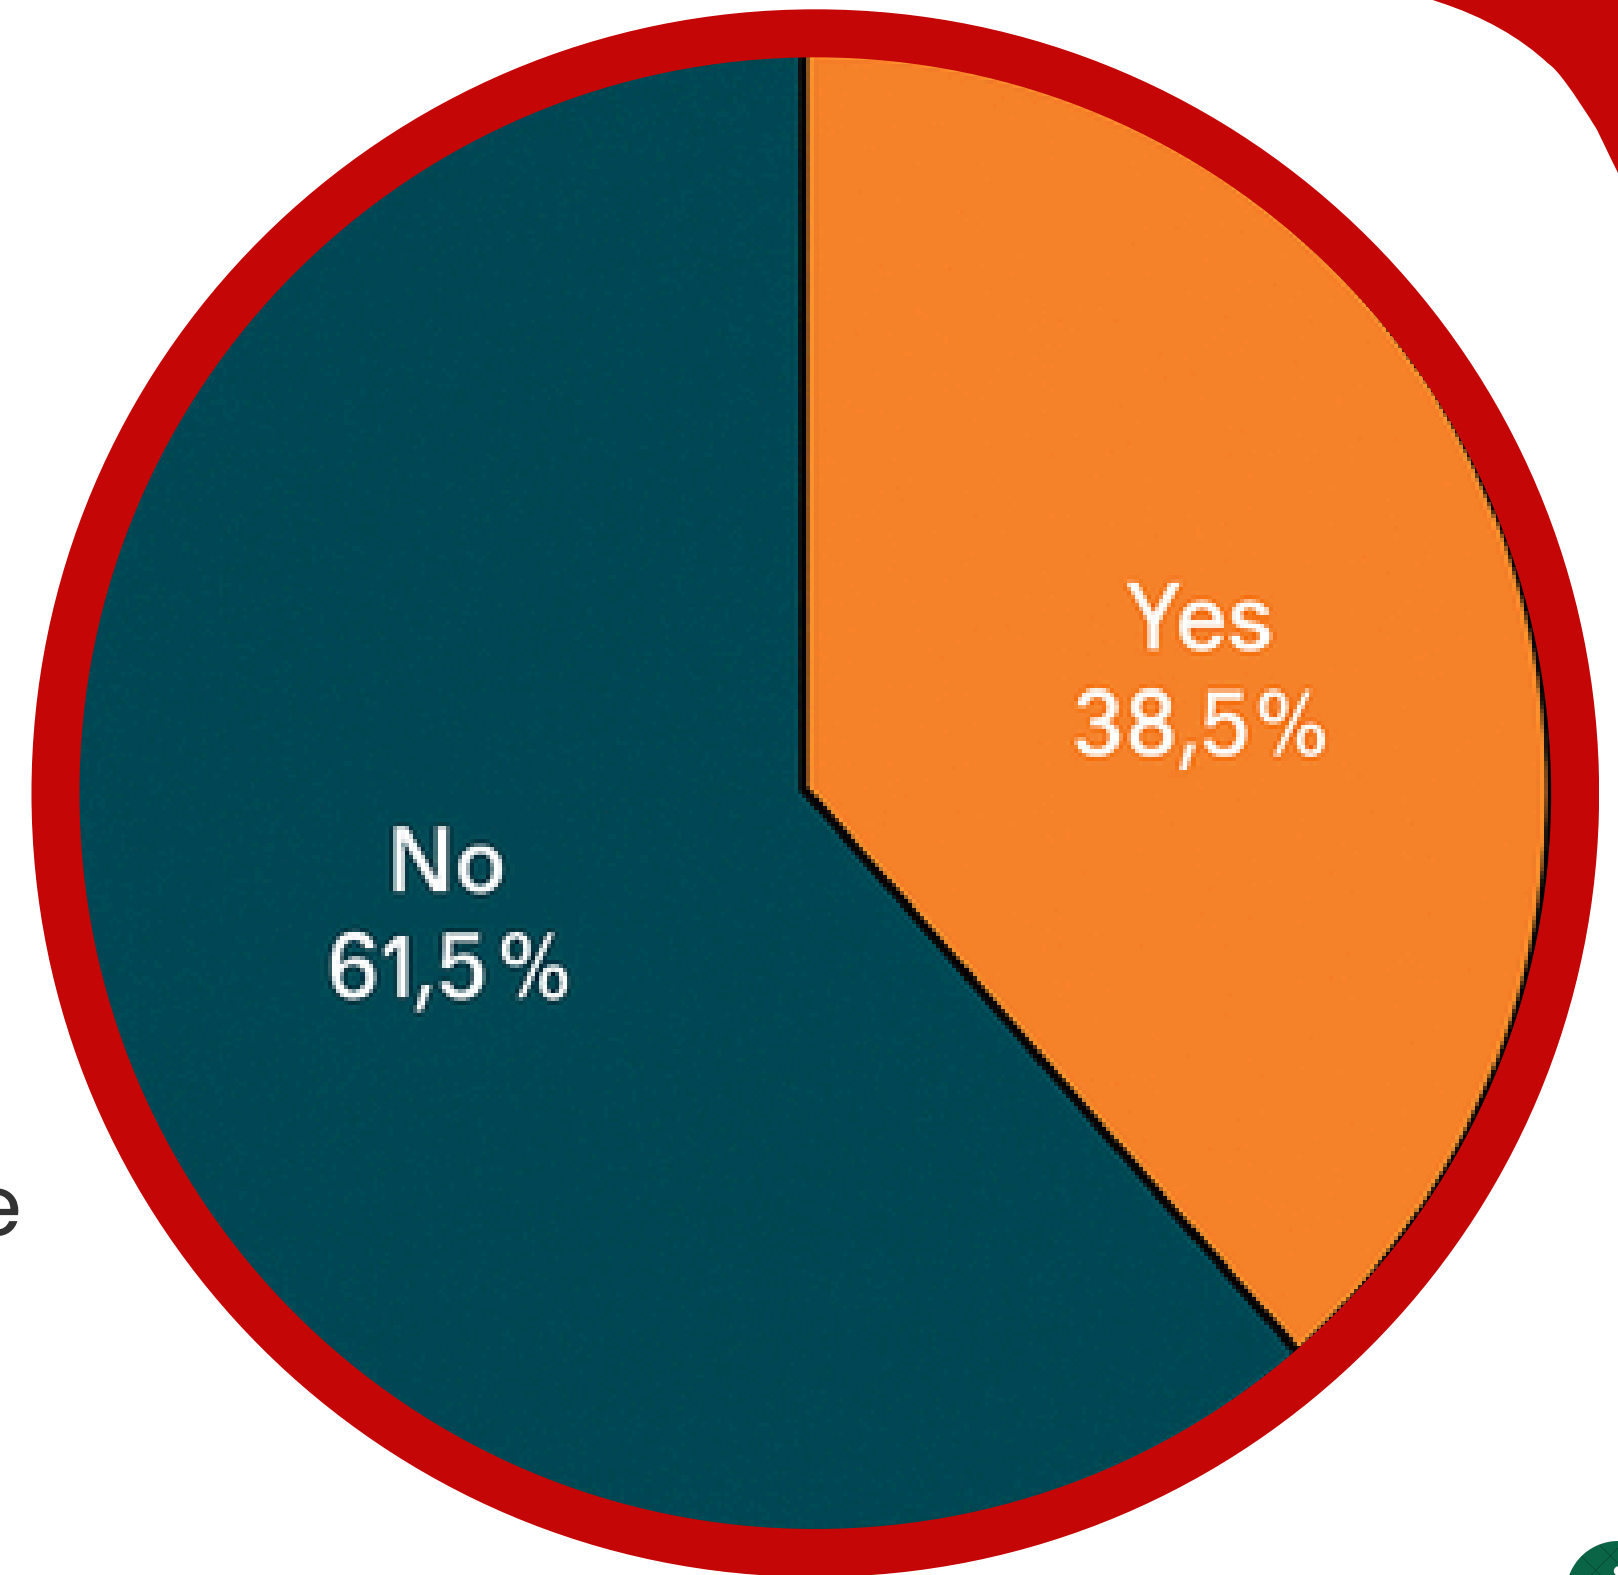

MOST RESTAURANTS FALL UNDER CATEGORIES LIKE CASUAL DINING, QUICK BITES, AND CAFES. THESE CATEGORIES CATER TO DAILY CONSUMERS AND ARE MORE ACCESSIBLE TO THE GENERAL PUBLIC. FINE DINING IS LESS COMMON AND MAINLY PRESENT IN UPSCALE LOCATIONS.

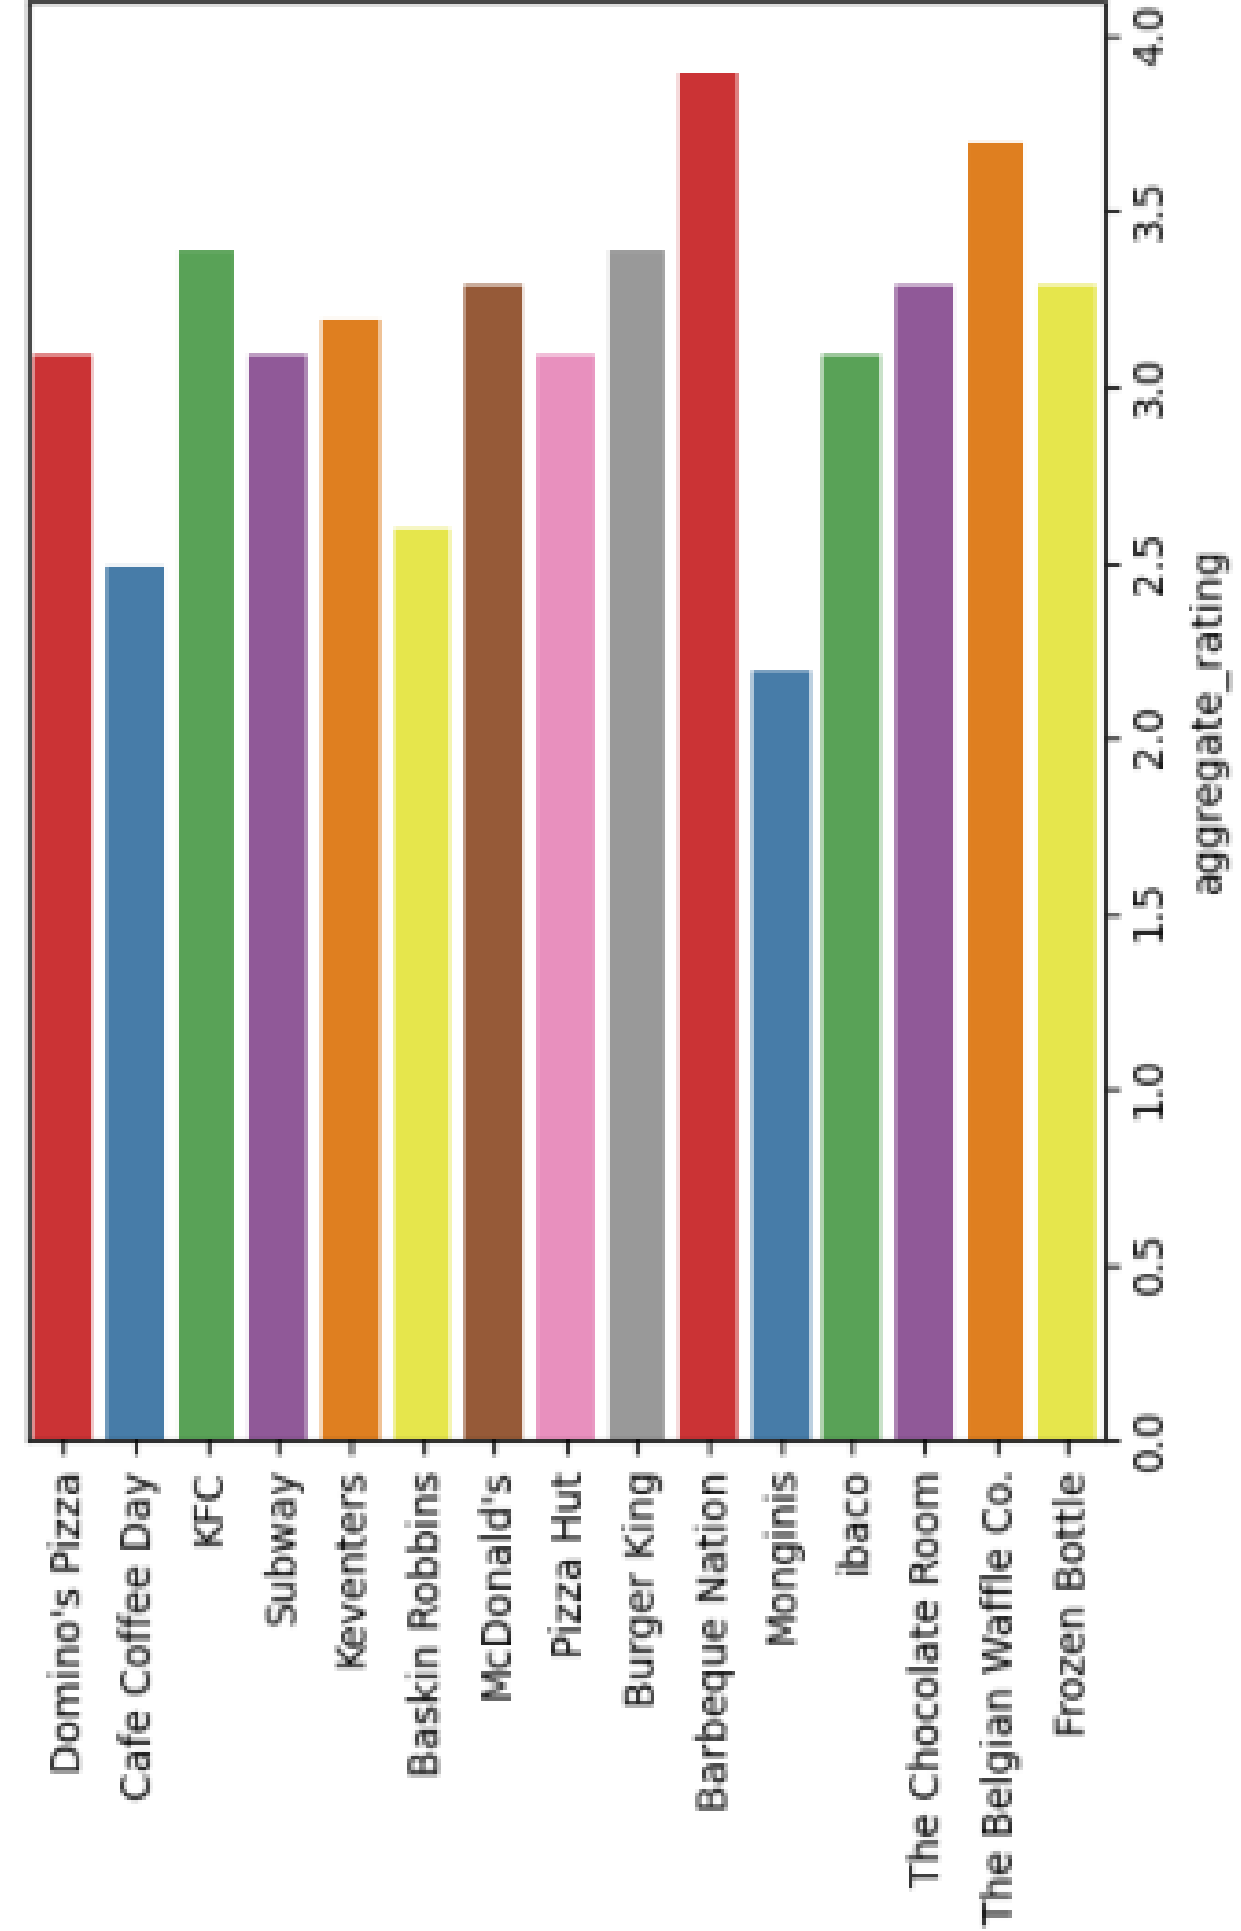

AVAILABILITY OF ONLINE DELIVERY

Online delivery is a growing trend, particularly in metro cities. While a large number of restaurants still do not offer online delivery, there is a clear shift toward digital ordering, especially post-pandemic. Businesses without online delivery may lose competitive advantage.

Customer Rating Patterns

Online delivery is a growing trend, particularly in metro cities. While a large number of restaurants still do not offer online delivery, there is a clear shift toward digital ordering, especially post-pandemic. Businesses without online delivery may lose competitive advantage.

KEY OBSERVATIONS

- North Indian, Chinese, and Fast Food are the most demanded cuisines.
- Casual Dining and Quick Bites are the most common restaurant formats.
- Online delivery is growing rapidly, especially in urban areas.
- Customer ratings are mostly favorable, with most restaurants rated above 3.5.
- Delhi NCR, Bangalore, and Mumbai have the highest number of listed restaurants.

BUSINESS RECOMMENDATIONS

- Focus on launching restaurants in cities like Delhi and Bangalore for better reach.
- Offer popular cuisines such as North Indian and Chinese to attract more customers.
- Implement online delivery services to meet customer expectations.
- Maintain strong customer experience to achieve high ratings.

THANK YOU
